

### Maximum coverage

G&B covers 80% of the market – the most popular domestic and import cars, SUVs and light trucks that come in for service. With new applications being added regularly, installers are sure to find the replacement hubs they need.

### The brand you can afford

Working direct with OEMs means we can pass on the savings to you. With G&B, customers receive the highest quality hubs at prices they can afford, maximizing their investment.

For optimum performance, G&B products should only be installed by experienced professional mechanics or qualified maintenance professionals. Always follow the vehicle manufacturer's installation instructions.

**The hub you  
install once.**

**The brand  
you choose,  
over and over.**

High quality. Affordable prices. Fast delivery. And a guarantee for every box that carries our label.

That's the G&B promise.

Worldwide Automotive Parts Distributor

# The real beauty is on the inside

Inside every G&B hub is an assembly engineered to exacting OEM specs. Designed with the high quality you expect. At a price you can afford. Features like:

## Integral raceway design

One of the most important components of a bearing is its raceway – the road ridden by the balls. No shortcuts are taken with G&B's raceway; it's designed to spec, delivering optimal load capacity, greater wheel stiffness and increased service life.

## OEM sensors and electronics

Using a poor quality or economy hub assembly can knock vehicle systems out of whack. That's why every G&B hub has OEM-manufactured sensors and electronics, assuring that vehicle-equipped anti-lock brake, traction control and tire pressure monitor systems all function properly.

OEM sensors and electronics ensure ABS, TC and TPM systems function properly

Integral raceway for optimal load capacity

Heavy-duty balls for maximum wear resistance

Sealed assembly prevents contaminants and extends service life

Engineered to fit like the original hub

## Built to fit your application

At G&B, every hub is built for the specific vehicle application. It's

easier to install, fits true like the original hub and delivers the long life you expect, reducing callbacks.

## Tested for safety and performance

G&B hubs undergo some of the most rigorous performance and safety tests around, including ISO 7141:2005 impact and OEM flange fatigue tests. And unless they pass with flying colors, they never get into an installer's hands.

## Made in the USA

Having US-based production plants and centrally located warehouses enables us to provide you with the high quality parts you need, quickly and economically. \*

*\*Some parts for import vehicles are made in the countries where foreign OEMs are based.*
